

Hola mundo con variables: Escribe un programa que muestre por pantalla “Hola, nombre” donde nombre es una variable que debes declarar e inicializar previamente con el valor de tu nombre.

The image shows a screenshot of a Python IDE window. The title bar at the top reads "python2.py - C:/Users/19_1DAW/Desktop/Python/python2.py (3.14.7)". Below the title bar is a menu bar with the following options: File, Edit, Format, Run, Options, Window, and Help. The main text area contains two lines of Python code: `nombre = "Daniel"` and `print(f"hola, Daniel")`. The code is color-coded: `nombre` is in blue, `=` is in black, `"Daniel"` is in red, `print` is in blue, `f"hola, Daniel"` is in red, and `()` is in black. A vertical scrollbar is visible on the right side of the text area. At the bottom right of the window, the status bar displays "Ln: 3 Col: 0".

```
python2.py - C:/Users/19_1DAW/Desktop/Python/python2.py (3.14.7)
File Edit Format Run Options Window Help
nombre = "Daniel"
print(f"hola, Daniel")
Ln: 3 Col: 0
```
